

Photoshop
Lesson: Using Filters
Lab Report

NAME _____

Instructions. Choose **four** separate filter groups for experimenting. Within each group, experiment with several of the filters in order to get a basic understanding of the range of effects available within the group. After you apply the filter and inspect its results, be sure to undo (choose **Undo** from the **Edit** menu) the results in order to restore the image to its original state.

Choose one of the filters in each group for this report. Execute the filter and use **File/Save As. . .** to make a copy of the results. Name the copy appropriately. For example, if you used the Spherize filter, the copy might be called *spherizegate.jpg*.

Fill in the form below for each of the four results. Indicate the name of the output file, the name of the filter, a general description of its function, and specific parameters or values employed in this instance (where appropriate).

1.

Filter Group:	
Output File:	
Filter:	
General description (function):	
Parameters (values) used:	

2.

Filter Group:	
Output File:	
Filter:	
General description (function):	
Parameters (values) used:	

3.

Filter Group:	
Output File:	
Filter:	
General description (function):	
Parameters (values) used:	

4.

Filter Group:	
Output File:	
Filter:	
General description (function):	
Parameters (values) used:
